

Mallory Valley Utility District

12" and 24" South Water Transmission Line Project

What?

- MVUD will be installing a new 24" water transmission line.
- We will upgrade and replace our PVC (polyvinyl chloride) water lines along the route with Ductile Iron Pipe.
- A new 12" distribution line will be installed.

Where?

- Water line construction will be along Franklin Rd, Mack Hatcher Pkwy, Cool Springs Blvd, W McEwen Dr, Mallory Ln., Liberty Pike, and Huffines Ridge.

When?

- Estimated construction schedule is between December 2021 – July 2023. Stay informed with project updates at www.mvud.org

Why?

- 24" transmission line: It was identified through a hydraulic water model analysis, the need to add a secondary water transmission line to serve the long-term infrastructure needs identified on the Capital Improvement Program.
- PVC Replacement: The district is mandated by the State to actively monitor and reduce water loss throughout its system and replace pipe as needed.
- 12" Distribution Line: Connect the water distribution lines at Franklin Rd. and Cool Springs Blvd. to provide improved operational redundancy.
